

How often should I fertilize my plants?

Fertilizing your plants is probably one of the most important things you can do to help your plants thrive. You will need to fertilize your shrubs, groundcovers, perennials, and trees at least once a year.

We suggest you fertilize in the spring and fall with an organic based plant fertilizer containing soil amendments, bio-stimulants, and micronutrients. Do not simply dump the fertilizer on the plant; spread the fertilizer around the drip line of the plant using a cup. Please follow the instructions on the bag of fertilizer.
